

RITHIKA RAMASAMY

FULL STACK ENGINEER | AI DRIVEN SYSTEMS

+91 8056448057
rithika293.work@gmail.com
Bengaluru, Karnataka

<https://www.linkedin.com/in/rithika-r-0b0526213/> <https://resume-kohl-mu-90.vercel.app/> <https://github.com/Rithikaram29>

SUMMARY

Full-stack engineer with 1+ year building scalable fintech and real-time systems using React, Node.js, Kafka, and Redis. Experienced in high-performance APIs and AI-driven applications, including computer vision with YOLOv8.

TECHNICAL SKILLS

Frontend: React, React Native, HTML, CSS3, TypeScript, Redux/Zustand
Backend: Node.js, python, Express, Fastify, REST, GraphQL, Zod
Databases: MongoDB, Supabase, Redis
DevOps: Docker, GitHub Actions, CI/CD
Tools: Git, Bitbucket, Postman
Others: Kafka, YOLOv8, OpenCV, BLE

SOFT SKILLS

Collaboration
Communication
Problem-solving
Ownership
Adaptability
Attention to Detail
Time management

PROFESSIONAL EXPERIENCE

SDE 1, Neokred technologies Private Limited

Feb 2025 - Present

Bengaluru

- Built full-stack features for a high-scale fintech system handling ~10K requests/min using React (TS) and Node.js
- Automated cross-service workflows, reducing manual effort by ~60%
- Implemented Kafka-based producers/consumers for asynchronous and distributed event processing
- Improved performance using Redis caching and optimized API design, reducing latency and enhancing data flow
- Designed idempotent APIs and a configurable logging system, cutting duplicate processing and reducing storage costs by ~34%
- Automated reconciliation workflows, reducing processing time by ~75% and improving system reliability

EDUCATION

Aug 2025 - Present

Data science and AI, Intellipaate School of technologies

Mar 2024 – Jan 2025

Full stack development, Prepleaf by Masai Schools

Apr 2017 – May 2022

Bachelors of Architecture, Measi academy of architecture

PROJECTS

Go Boarding (Bus Ticket Booking)

Typescript | React | MongoDB | Express | Node.js

<https://go-boarding-bus-app-yfk7.vercel.app/>

<https://github.com/Rithikaram29/go-boarding-bus-app>

- Built a full-stack bus ticketing platform with real-time seat management
- Enabled secure bookings and trip updates
- Implemented intuitive booking flows and improved UI usability

AI based grocery detection prototype

Python | YOLOv8 | Open CV | MERN | Supabase

Linkedin-link

<https://github.com/Rithikaram29/GroceryDetectionApp>

<https://github.com/Rithikaram29/indian-grocery-detection>

- Built YOLO-based grocery detection system with feedback-driven retraining.
- Migrated web app to React Native for improved accessibility
- Implemented continuous learning to enhance model accuracy

Eleven11 App

Flutter | BLE | Supabase

https://play.google.com/store/apps/details?id=com.eleven11studios.eleven11&pcampaignid=web_share

- Developed backend logic and Bluetooth Low Energy (BLE) communication to interface with hardware device.
- Implemented UI functionalities in collaboration with teammate who designed the frontend screens.
- Built and managed Supabase database for storing device data, user interactions and real-time updates.
- Coordinated meetings and communications between teammates, client and hardware engineers to ensure smooth project execution.

NON-TECH BACKGROUND

Junior Architect, Midori Architects, Center for vernacular architecture

2022 - 2024

- Led requirement gathering, coordinated with vendors, and managed project documentation and timelines.
- Created 3D models and environmental and structural analysis to guide design decisions and trade-offs.
